# Accepting Change vs. Choosing Evolution

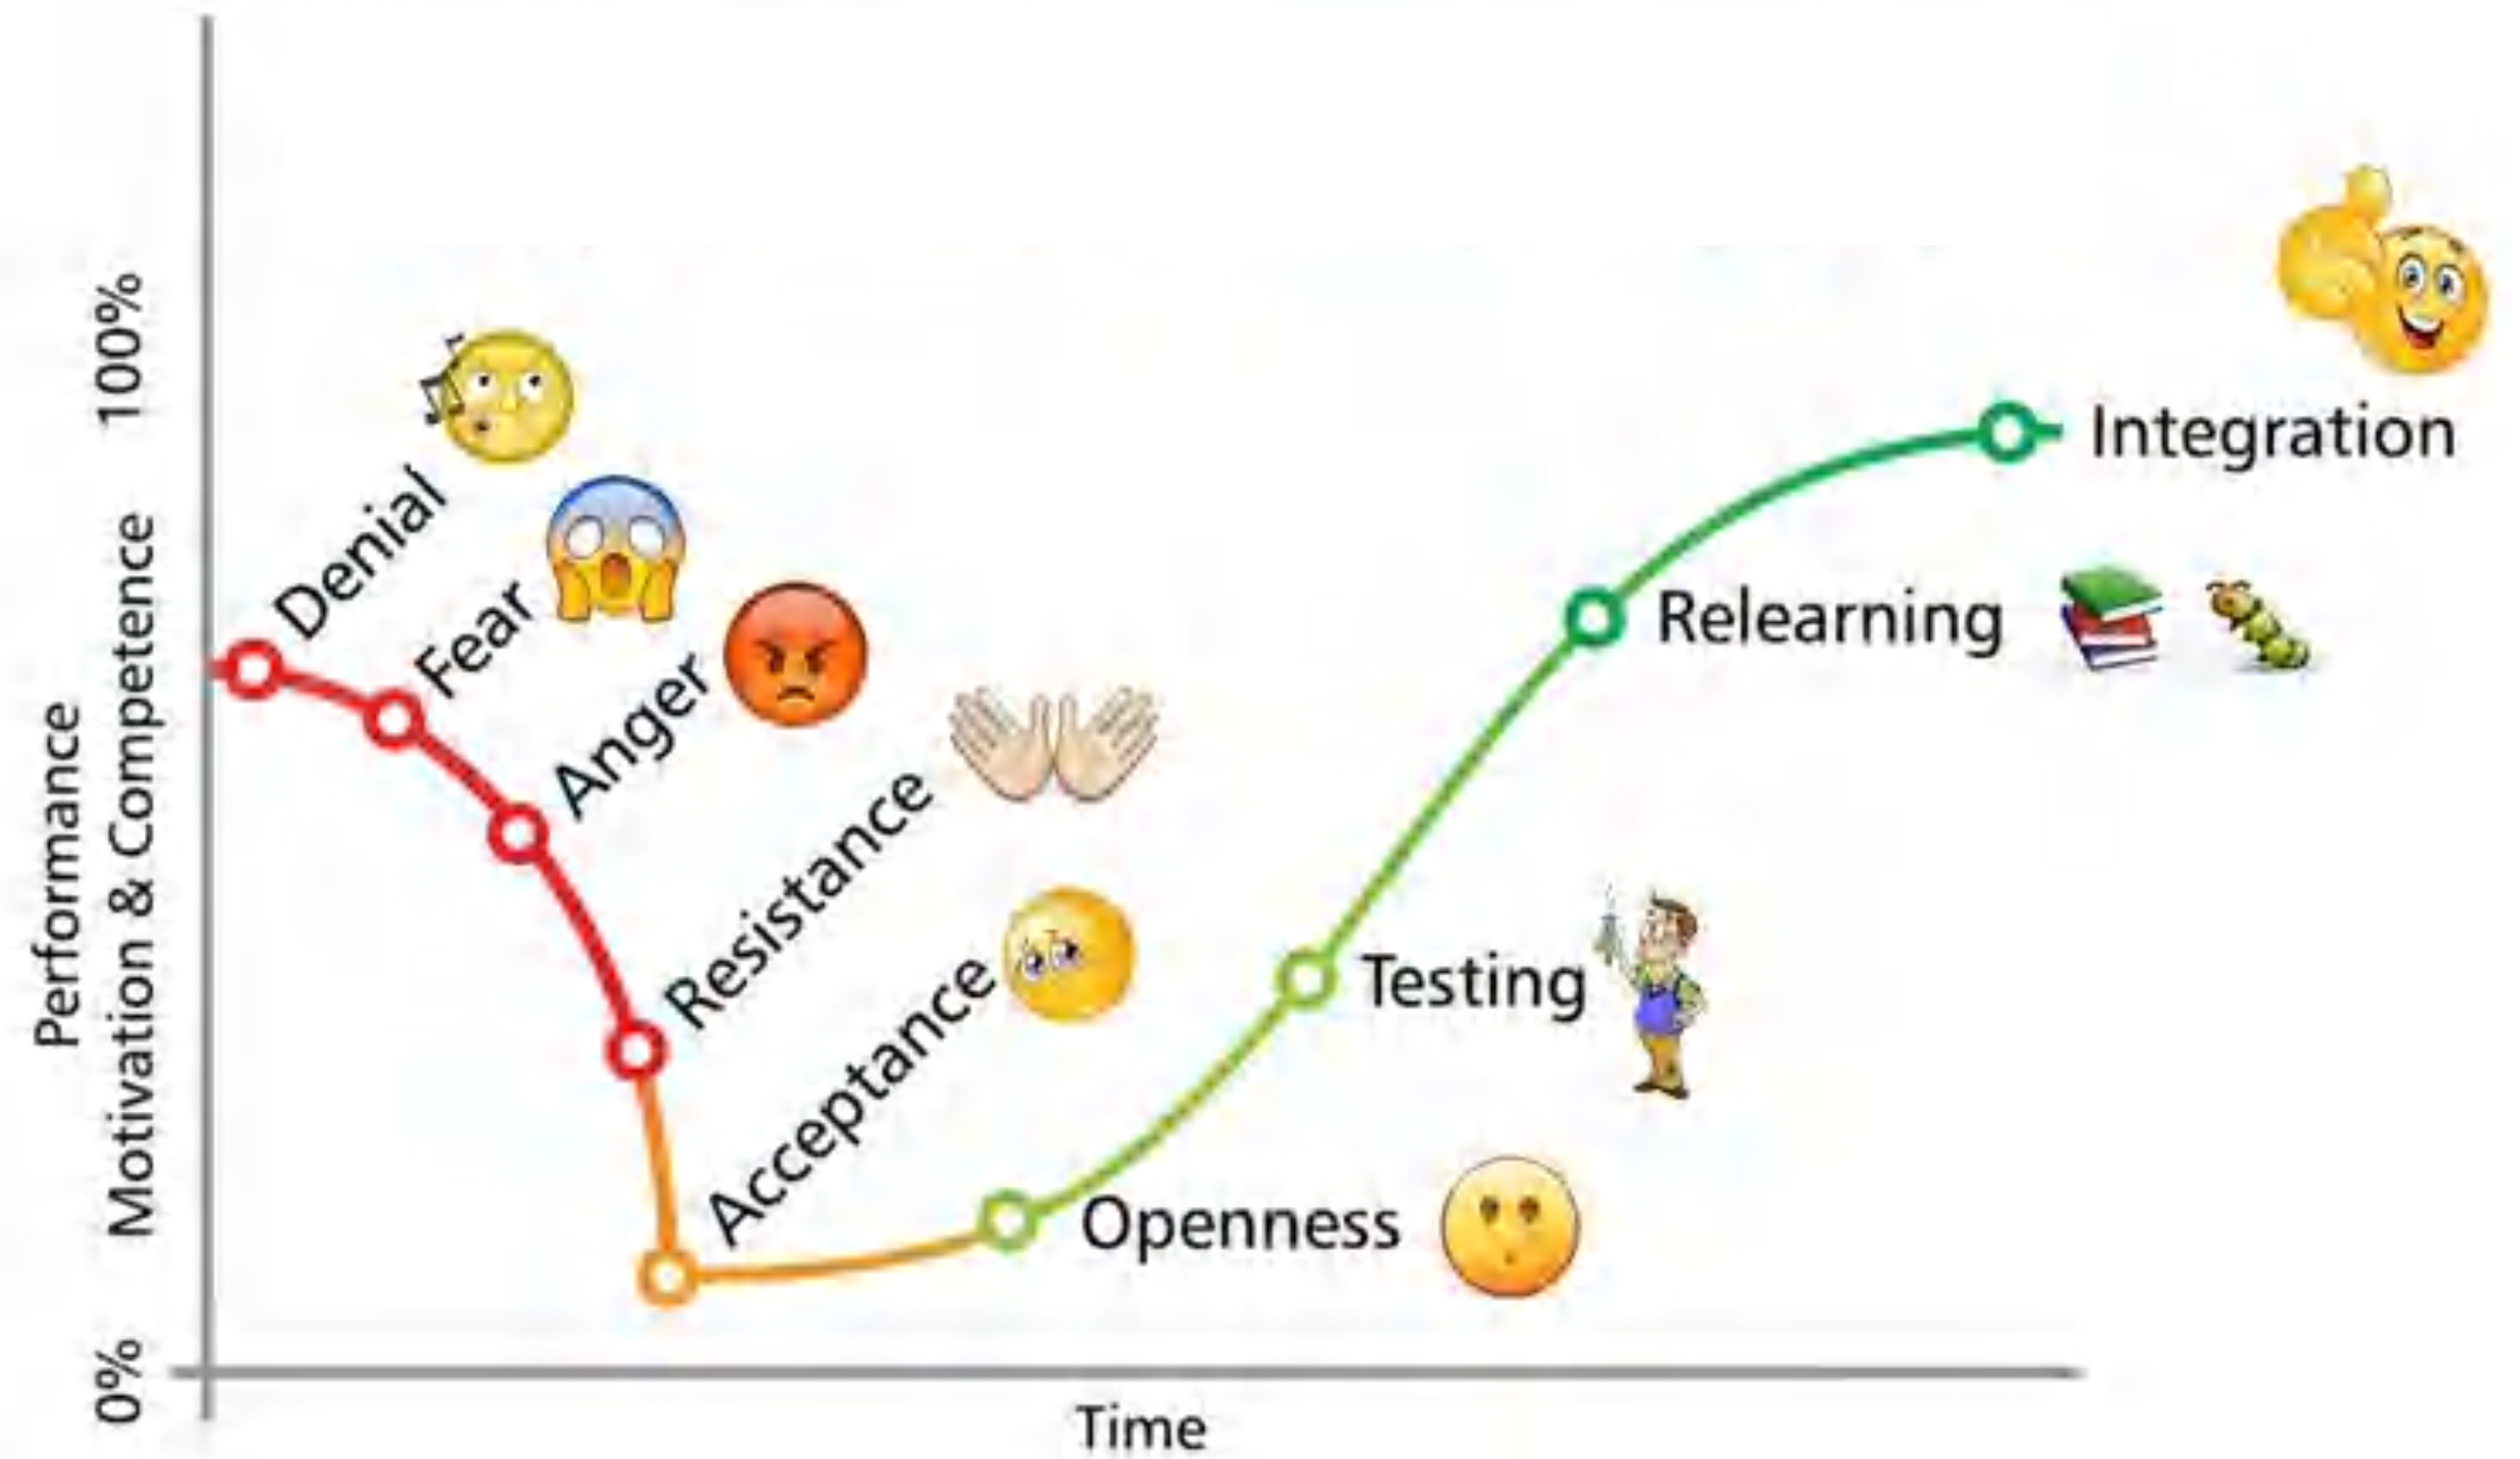

The friction recipe is rarely just one ingredient...

- Don't like discomfort
- Don't have the resources or support
- Haven't experience the pain necessary to motivate change
- Do not see a need
- There is a payoff for the behavior
- Environment is holding them back or doesn't allow them to change
- Won't admit they were wrong or need to change
- Fear change - are afraid of failure
- Aren't responding well to input or criticism
- Like how things are done now
- It's political
